

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

## 1. What parts of encapsulating your logic were easy?

- Understanding what needs to be done from the word ‘factory function’ , I knew I needed to create a function that creates and returns an object
- Structuring the code was easy , specifically getters and setters , using destructuring for an object as a parameter(ended up not using it though)

---

## 2. What parts of encapsulating your logic were hard?

- Setting up the function in a way that makes sense .
- Knowing when and what to return , especially with getters and setters .
- Because i was limited to use factory function What i expected to do and what i needed to do were different

---

3. Is abstracting the book preview a good or bad idea? Why?

- Yes, for code reusability , only one function can be called anywhere in my code and there isn't any need for repetition
